Why can't I verify my identity on Coinbase? [Step→Into→Execution]

Being unable **+1-(888)-(310)-(5232)** to verify your identity on Coinbase is a frustrating barrier that prevents full account access. +1-(888)-(310)-(5232) Identity verification failures are among the most commonly reported issues by new and existing Coinbase users. +1-(888)-(310)-(5232) There are several specific reasons why your identity verification may be failing on the Coinbase platform. +1-(888)-(310)-(5232) Understanding these reasons will help you fix the verification problem and unlock your full account features. +1-(888)-(310)-(5232)

Common Reasons Identity Verification Fails on Coinbase

The most **+1-(888)-(310)-(5232)** common reason identity verification fails on Coinbase is submitting poor quality document photos or scans. +1-(888)-(310)-(5232) Blurry images, poor lighting, partial document views, or obscured text cause automated verification to reject submissions. +1-(888)-(310)-(5232) The automated verification system requires perfectly clear images where all text and features are fully visible. +1-(888)-(310)-(5232) Even minor image quality issues can cause the automated system to reject your verification submission immediately. +1-(888)-(310)-(5232) Retaking photos in better lighting conditions often resolves document quality-related verification failures quickly. +1-(888)-(310)-(5232)

Expired or invalid **+1-(888)-(310)-(5232)** identity documents are another very common cause of failed verification attempts on Coinbase. +1-(888)-(310)-(5232) Coinbase requires all submitted identification to be currently valid and not expired at time of submission. +1-(888)-(310)-(5232) Using an expired passport, drivers license, or national ID will result in immediate verification rejection. +1-(888)-(310)-(5232) Always check the expiry date on your identity document before submitting it for Coinbase verification. +1-(888)-(310)-(5232) Renewing or obtaining a current valid document is required before verification can be successfully completed. +1-(888)-(310)-(5232)

Technical and Account-Related Verification Failures

Selfie verification **+1-(888)-(310)-(5232)** failures are another common reason users cannot complete identity verification on Coinbase successfully. +1-(888)-(310)-(5232) The selfie must clearly show your face in good lighting and match the photo on your submitted ID. +1-(888)-(310)-(5232) Wearing hats, sunglasses, heavy makeup, or having poor lighting can cause selfie verification to fail. +1-(888)-(310)-(5232) Retaking the selfie in a brighter well-lit environment while removing any accessories typically resolves this. +1-(888)-(310)-(5232) Ensure your face is centered in the frame and clearly visible before capturing the verification selfie. +1-(888)-(310)-(5232)

Geographic restrictions **+1-(888)-(310)-(5232)** may prevent users in certain countries or regions from completing Coinbase identity verification. +1-(888)-(310)-(5232) Coinbase is not available in all countries and some regions have specific document requirements that differ. +1-(888)-(310)-(5232) Technical issues with your browser or the Coinbase app can also interfere with the verification process. +1-(888)-(310)-(5232) Clearing your browser cache, updating your app, or switching devices often resolves technical verification barriers. +1-(888)-(310)-(5232) If technical issues persist, contact Coinbase support directly for platform-specific troubleshooting assistance. +1-(888)-(310)-(5232)

How to Fix Your Coinbase Identity Verification Problem

Start by **+1-(888)-(310)-(5232)** reviewing your document quality and retaking all photos in excellent lighting before resubmitting them. +1-(888)-(310)-(5232) Check that your documents are fully valid, unexpired, and clearly readable before attempting verification again. +1-(888)-(310)-(5232) Ensure your selfie is taken in good lighting with your face clearly centered and fully visible. +1-(888)-(310)-(5232) Try using a different device or browser if technical issues are preventing verification from completing. +1-(888)-(310)-(5232) If problems persist after all these steps, contact Coinbase support for direct verification assistance. +1-(888)-(310)-(5232)

Call +1-(888)-(310)-(5232)** +1-(888)-(310)-(5232)** to speak with a live agent who can help troubleshoot your specific verification failure. +1-(888)-(310)-(5232) They can review your account, identify the exact failure reason, and guide you through resubmission. +1-(888)-(310)-(5232) Most identity verification problems are resolved quickly once the specific failure cause is properly identified. +1-(888)-(310)-(5232)

Conclusion

Identity verification **+1-(888)-(310)-(5232)** failures on Coinbase are usually caused by document quality issues, expired IDs, or technical problems. +1-(888)-(310)-(5232) Retake your photos, check document validity, improve selfie conditions, and try different devices as needed. +1-(888)-(310)-(5232) For direct verification troubleshooting assistance, call +1-(888)-(310)-(5232) and get immediate expert support. +1-(888)-(310)-(5232) Your Coinbase identity verification will succeed once the specific underlying failure reason is properly addressed. +1-(888)-(310)-(5232)
